## DETAILED ACTION

This is an Allowance for Application no. 09/854,463 in response to the amendment filed on November 14, 2006.

### ***Response to Amendment***

The amendment to claims 21, 22, 26, 27, 34-44 and 52-62 overcome the previous rejection under 35 U.S.C. 112, first paragraph.

### ***Allowable Subject Matter***

Claims 1-2 and 15-62 allowed.

The following is an examiner's statement of reasons for allowance:

In regards to claims 1 and 2, the claims pertain to a novel method for coding video that the examiner was unable to find in several prior art searches. As noted in the previous office action, dated June 14, 2005, the claims define over the combination of the prior art of Choon (US Patent 5,410,553) and Reed et al. (US Patent 6,351,493).

The claims further teach over 'Concealment techniques for data-reduced HDTV recording' by Kharatichvili et al. Kharatichvili teaches a HDTV encoding and decoding process for recording on a VCR wherein a mode decision flag is added to the bitstream for controlling error concealment during the decoding process (Pages 178-179).

Kharatichvili is silent on the use of H.263 encoding format and the inclusion of the error concealment indicator in the Supplemental Enhancement Information. These features taken with the others in the claims define over the prior art.

In regards to claims 15, 21, 23, 26, 27, 28, 63 and 64, Kharatichvili teaches the use of an encoded video signal indicator but is silent on the use of a separate error

concealment method indicator which is provided in the encoded video signal. This feature taken with the others in the claims define over the prior art.

In regards to claims 19, 35, 46, and 53, Kharatichvili is silent on the use of H.263 and the inclusion of the error concealment indicator in the Supplemental Enhancement Information. This feature taken with the others in the claims define over the prior art.

In regards to claims 29, 36, 41-44, 47, 54, and 59-62, Kharatichvili and Reed are silent on the use of the indicator as a "scene identifier associated with the scenes, the scene identifier having the same value for all pictures of a scene, the scene identifier having a different value for each different scene" as required by claims 29, 36, 47, 54, and 59-62. Kharatichvili and Reed are further silent on the decoding method wherein "scene indicator for the picture with a scene indicator for a temporally neighboring correctly decoded picture and, if the scene indicator for the picture is the same as the scene indicator for the temporally neighboring correctly decoded picture, applying a temporally predictive error concealment algorithm in the decoding process for the picture " as required by claims 41-44. These features taken with the others in the claims define over the prior art.
